

1) How long will the roof coating last?

Our products carry a 10 year, 12 year and LIFETIME manufacturer's warranty on the coatings. But the life expectancy is closer to 20 years at which time it can simply be cleaned and re-coated again.

2) Do I still have to clean my roof as often as I do now?

No! Our manufacturers spent many years developing their roof coatings with Teflon which will stay cleaner and retain gloss longer than any conventional acrylic roof coating due to being enhanced with self-cleaning Nanotechnology.

3) How long does it take for your Roof Coating products to begin working?

Immediately! There is no wait time on the affects. Once applied and in place, the coatings will begin to save your conditioned air, lower your energy bills and keep your roof sparkling clean and new.

4) What if I choose to keep the existing variance of color on my roof or what if I have a new roof?

We have an energy efficient Clear Liquid Insulation Coating; engineered at the Nano level to be impenetrable. The micro thin layering of our coating disallows the damaging properties of the sun, weather, and environment; guarding it from moisture, corrosion, mold, mildew and the transfer of energy.

5) If I choose a dark color roof, will it soak up more sun and become hotter as the day progresses?

No – You can choose any dark color knowing that dark colors don't need to be hot colors; so aesthetics and functionality go hand in hand. This will change your thinking about roof paint and home cooling costs.

6) Do I have more than just a few color choices?

YES! Virtually any color you want. (available in a gloss or matte finish)

7) Is the cost of applying a reflective roof coating a good investment?

YES! Applying a reflective roof coating is an excellent investment because from a budget management aspect, it affords the opportunity to extend the life of your roof rather than replace it. Therefore, they may usually be expensed in the fiscal year during which they are applied instead of amortizing the cost over the life of the roof (as in a new membrane installation) This can be a huge tax benefit.

8) Why Re-Roof when you can restore?

Restoration is better than a new roof because re-roofing is expensive and repairs don't last. The fact is 90% of roofs in the USA can be restored at a 45-80% savings. In addition, our products are better for your roof than new cement roof tiles, asphalt shingles and metal sheeting which do not have thermal protection technology. Also the appearance of your home is greatly improved with a clean gloss, matte, crystal clear or colored finished roof and more importantly a durable coating protects your roof from the effects of aging.
