

**Florida roofs are subjected to a year round biological weathering caused by moss, lichen, mold, mildew and bacteria. Unlike Elastomeric paints Our Top-Coats resist airborne pollution and dirt which can discolor and deteriorate conventional roof paints. RHINO ROOF PROTECTION COATINGS provide protection against peeling, discoloration by dirt, moss, algae and fungus. Our Roof Coatings are enhanced with Teflon self-cleaning Nano-Technology, which incorporates a State-of-the-Art Roof Coating System that provides excellent protection against these destructive growths.**
